Document four

From: [REDACTED] (Office for Renewable Energy Deployment)
Sent: 06 May 2015 15:49
To: [REDACTED]@communitywindpower.co.uk
Cc: [REDACTED] (Office for Renewable Energy Deployment); [REDACTED] (Office for Renewable Energy Deployment); [REDACTED] (Office for Renewable Energy Deployment)
Subject: Onshore wind deployment under the Renewables Obligation in 2016/17

RO calculation
2016-17 - ONW - Com

Dear [REDACTED]

You may remember that we spoke at the end of February in connection with your company's successful CfD bid for the Sneddon Law project.

I'm writing now to ask for your help with DECC's annual exercise to calculate the level of the Renewables Obligation, in this case for the year 2016/17. The exercise involves us estimating the amount of generation there will be from accredited renewable electricity stations in a given year, converting that to the number of ROCs that we estimate will be issued in the year and then translating this into the level of the obligation placed on electricity suppliers in the UK for 2016/17.

This request is for information on **your company's onshore wind projects**. Attached is a spreadsheet listing projects currently under development taken from DECC's Renewable Energy Planning Database (REPD), a near-comprehensive list of all known renewable electricity projects in the pipeline of 1MW and above. Details of operational projects or projects that have either had a planning application refused, withdrawn or abandoned are not included. However, projects with a live planning appeal are included where known. We have populated the spreadsheet with the data as it currently appears on REPD. The last updated in mid-April.

I'd be grateful if you would please arrange for the spreadsheet to be reviewed and returned with any amendments or additions to me and my colleagues on the cc list as above. I'd very much appreciate it if we could have **your response by next Friday, 15 May**.

What we would like you to do is let us know:

- Which of the projects listed do you expect to commission and start generating by or during the 2016/17 financial year;
- If possible, tell us when you expect each project to start generating (provide MM/YY data if possible, or Q1, Q2 etc. if you can't be that precise at this stage);
- Provide the expected load factor of each project; If you are unable to provide the load factor, we will apply a standard load factor. Details of what we did for the 2015/16 RO calculation can be found on page 6 of the 1 October 2014 announcement, available at the following link:

https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/360517/ro.pdf. This will be updated for 2016/17.

- We are interested in knowing about any barriers to commissioning under the RO before it closes in April 2017, e.g. need for an aviation mitigation solution to discharge a planning condition, grid constraints etc., and for each project whether you expect to need a grace period until April 2018;
- We are also looking beyond the RO to get a sense of which projects may wish to come forward under the Contracts for Difference;
- Please correct any data which may be incorrect, e.g. capacity, and add any projects that we may have missed.

It's important that we estimate deployment under the RO as accurately as possible as the final level will set the overall cost of the RO in 2016/17 and be reflected in consumer bills. I do hope that you will be able to help.

Dear [REDACTED]

It was nice talking to you yesterday and thank you for taking my call. Congratulations again on your company's success in securing the offer of a contract for difference for the Sneddon Law project. [REDACTED]

I'm copying in my colleague [REDACTED] ([REDACTED] – Tel: 0300 068 [REDACTED]) in case you have any questions or would like to talk to us about the Government's onshore wind policy.

Thanks for the feedback you gave me on the CfD process. I've passed it on to the relevant DECC colleagues. There will be a proper evaluation of the auction round – a stakeholder bulletin went around today with the details, and I've attached a copy in case you haven't seen it and wish to contribute your thoughts.

Kind regards,

Subject: DECC ELECTRICITY MARKET REFORM STAKEHOLDER BULLETIN

DECC ELECTRICITY MARKET REFORM STAKEHOLDER BULLETIN

Dear Colleague

Capacity Market Rules interconnection amendments

Following industry page-turning sessions in November / December 2014 on proposed amendments to the Capacity Market Rules, we are pleased to announce a further opportunity to review the drafting of the Rules to implement the Government's policy on interconnectors in the Capacity Market. The revised draft amendments to the Capacity Market Rules will be available next Monday 2 March and we are able to receive comments up until Monday 9 March. The final Rules will be published before the end of March.

The interconnection amendments contain the operational and technical details of how interconnectors will participate in each stage of the process, in particular:

Determination of the Applicant

Prequalification Requirements (planning consents, Applicant declarations etc.)

If awarded a Capacity Agreement, milestones for prospective interconnector CMUs

Interconnectors as Price-takers only i.e. unable to set the marginal price

Consequences of a prospective interconnector CMU failing to meet milestones

Information disclosure arrangements (still finalising details of how this will work in the case of an unincorporated joint venture – input welcome)

Please contact  @decc.gsi.gov.uk to request a copy of the revised draft Capacity Market Rule amendments.

EMR Evaluation

DECC is continuing its independent evaluation of EMR and Final Investment Decision Enabling for Renewables (FIDeR). This first phase of evaluation being carried out by Grant Thornton and Poyry, is primarily evaluating the processes involved in the first Capacity Market (CM) auction, Contracts for Difference (CFD) allocation and Final Investment Decision Enabling for Renewables (FIDeR) process. The evaluation will, though, also look for any early evidence that the EMR programme is on track to deliver its intended benefits. The evaluation project will report in Summer 2015.

Evidence on whether we are realising the full benefits of EMR will only become available over time as the mechanisms bed in and so a two further phases are planned at appropriate points in the future. We are choosing to evaluate at this early stage in order to capture early lessons for policy-makers and to refine the policy and its instruments and to inform the scope of further evaluation projects.

The stakeholder research for the project has started and will be running until the end of March. It has two phases, starting with the Capacity Market in February and moving onto CFD and FIDeR in March. During this period, the evaluators will be seeking input from a broad range of stakeholders and will be in contact directly. If you would like more information, please contact [REDACTED]@decc.gsi.gov.uk

The DECC EMR team

If you know of any colleagues who would like to be added to the EMR Stakeholder Bulletin distribution list, please ask them to email [REDACTED]@decc.gsi.gov.uk
